

Date	Task	Person in Charge	Knowledge Acquired/Realizations
May 17, 2021	Research Design And initial output.	Darren Tuban	In creating explanations about the app that we researchers are developing, I learned and understood more about the importance and benefits of our app to the user. Explaining and checking to discern the functionality of the app helped us to know more about our goal and why we started this research.
May 18, 2021	Hardware/Software Requirements	Jan Gabriel Angeles	While developing the Hardware/software Requirements, we determined what software and hardware are essential in creating, developing, and constructing our app. We also need to consider the specs of our PC to run programs such as android studio, IDEs and emulators for testing. As these are what our research builds upon when considering development in programming.
May 19, 2021	Software used to develop the system	Christian Joseph	I've realized that the Software that you need to develop a program provides the necessary tools in creating apps that will assist us in the future with its versatility and compatibility.
May 20, 2021	Finalization of Chapter 3	Ruzzel Onggod	In terms of understanding the literature, I have become aware that The development phase or Chapter 3 is a significant part of presenting the study application development, As well as the necessary steps to take note of when pursuing development.
May 21, 2021	Flowchart and checking of the whole manuscript.	Milson Trinidad	Through the development of the flowchart and understanding how the program should work depending on our progress, Realizing what one should consider in developing a program for their goals. The conditions and mechanisms intrigue me and made me understand the concept of development even more. Including the checking of the manuscript, giving me a boost in knowing progression in research.
